

Traffic Crash Facts Annual Report 2014

Create Date: 9/11/2015

Important Information Please Read

Please note while reviewing the 2014 Crash Facts Annual Report the statistics produced in this document are static in nature and are subject to change as new and updated crash reports are received after the closeout date of July 30, 2015. Additionally, the 2013 statistics reflect static values reported in the 2013 Crash Facts Publication with a closeout date of October 13, 2014. While reviewing this publication, the Florida Traffic Crash Statistics Summary may not reflect the same totals as additional sub tables throughout this document. This is due to the nature of crash reporting and fields that can be reported with one to many selections. For example, a Non-Motorist such as a Bicyclist can be reported with up to two separate Safety Equipment selections. This may increase the number of reported injuries and fatalities when looking at a specific Safety Equipment value. The information contained in this Traffic Crash Statistics booklet is extracted from law enforcement agency reports (HSMV 90010S) of traffic crashes in which a motor vehicle is involved and which meets the following criteria:

- Motor vehicle crashes resulting in death or personal injury; or
- Motor vehicle crashes in which one or more of the following conditions occur:
 - Leaving the scene involving damage to an attended vehicle or property (Section 316.061 (1), Fla. Stat.); or
 - Driving while under the influence of alcoholic beverages, chemical substances, or controlled substances or with an unlawful blood alcohol level (Section 316.193, Fla. Stat.); or
 - A vehicle was rendered inoperable to a degree that required a wrecker to remove it from the scene of the crash; or
 - Involved a commercial motor vehicle

For questions or concerns, please contact the FIRES Crash Records Team by email at fires@appriss.com <<mailto:fires@appriss.com>>. Also, please visit the FIRES Public Portal for updated crash statistics <<https://firesportal.com/Pages/Public/QuickStats.aspx>>. The numbers reflected on the FIRES Public Portal are dynamic in nature and will fluctuate over time as new and updated crash reports are received.

Note: In the 2014 Crash Facts, tables for injury levels and restraint types have been modified to show only the cross-tab totals for each restraint/equipment type. This change was made to better accommodate the purpose of these tables and to show statistics on safety restraint/equipment usage as opposed to injury and fatality totals. Also, in the case of non-motorist safety equipment an individual can be using more than one equipment type, therefore column totals for injuries and fatalities will not be an accurate reflection of the true statistics.

Note: In the 2014 Crash Facts, tables for injury levels and restraint types have been modified to show only the cross-tab totals for each restraint/equipment type. This change was made to better accommodate the purpose of these tables and to show statistics on safety restraint/equipment usage as opposed to injury and fatality totals. Also, in the case of non-motorist safety equipment an individual can be using more than one equipment type, therefore column totals for injuries and fatalities will not be an accurate reflection of the true statistics.

Note: In the 2014 Crash Facts, fatalities and injuries may be counted in one or more driver action, due to the fact that a single crash can have multiple drivers. Therefore, the total number of fatalities, injuries and property damage crashes are not indicative of the true totals listed in the crash summary.

Crashes by Hour and Day

Top number for each hour/day is the total crash count. Bottom number is the fatal crash count.

Fatal and Injury crashes on this page should be viewed as the total number of times that a specific circumstance was reported and not the true total of fatal and injury crashes that were reported in the summary.

Note: In the 2014 Crash Facts, the Crashes by Vehicle Type table has been modified to exclude the column totals. This change was made to better accommodate the purpose of these tables and to show statistics on individual vehicle types as opposed to injury and fatality totals. In fact, a single crash can encompass multiple vehicle types, leading to the potential for crashes being counted more than once in the grand total. A true overall total for fatalities and injuries can be found in the summary table at the beginning of the Crash Facts publication.
